

Superior, high quality attachment range

Avant attachments have been designed specifically for Avant loaders. There are over 100 different attachments available, to suit almost any job. Their performance, durability, safety and compatibility are optimized so that they give maximum output together with Avant.

Top class features

The unique design makes AVANT an unrivalled machine in its class.

- Articulated design allows precise sideways moving of the load in tight situations
- Direct hydrostatic four wheel drive with four drive motors
- Certified ROPS safety frame with tinted plexiglass canopy as standard
- AVANT quick hitch system allows easy, safe and fast attachment coupling
- Wide variety of options and attachments available

AVANT 400 series

Strong and useful machine with excellent power-to-weight ratio, both for private and professional use.

- The most economical Avant with diesel engine
- Versatile and powerful machine
- Wide variety of options available, e.g. telescopic boom and light cab

	1100 lb 1200 lb		110 in		2050 lb 2250 lb
	20 hp g 20 hp d		7.5 mph		86 in 91 in

AVANT 500 series

Stronger and heavier than its kid brother, for both do-it-yourself as well as for professionals.

- Machine for almost any job
- Wide variety of options available, e.g. telescopic boom, boom self levelling and three different cabs

	1750 lb 2100 lb		110 in		2700 lb 2900 lb
	20-28 hp diesel		7.5 mph		95 in 100 in

AVANT 600 series

Lots of power both for drive and for attachments. Excellent choice for professional use.

- Avant with ample power for driving and operating hydraulic attachments at the same time
- High flow auxiliary hydraulics. Powerful hydraulic oil cooler as standard

	2400 lb		110 in		3000 lb 3050 lb
	28-37,5 hp diesel		10.5 mph		100 in

AVANT 700 series

Versatile power for demanding professional work.

- Biggest Avant with more power and drive speed
- Hydrostatic transmission - with two drive speed areas on Avant 750
- Auxiliary hydraulics oil flow as high as 18.5 gal/min
- New full DLX cab now also with air conditioning and air suspension seat as option

	3100 lb		122 in		3650 lb 3750 lb
	49 hp diesel		15 mph		119 in

Cab options

Avant 400-700 series loaders are equipped with a certified ROPS safety frame with tinted plexiglass canopy as standard. In addition, there are as many as three different cab options available for 500-700 series, and cab L for 400 series.

AVANT Cab L

AVANT cab L is an excellent and economical choice when the operator wants to have protection against rain, wind and snowfall. It improves operator comfort and working conditions considerably. The cab mounts on the standard ROPS frame, which means safety is guaranteed. It consists of windscreen (equipped with wiper and washer), right side window and rear window.

AVANT Cab LX

AVANT cab LX provides the option of a heated cab. The cab LX has all the features of cab L and, in addition, is equipped with a door and a heater, which further improve operator comfort in harsh weather conditions. And for warmer seasons the door and windows can easily be removed if required. The optional headlight, blinker, reflector + beacon kit can be installed both on cab L and LX.

AVANT Cab DLX

The cab DLX is an independent ROPS/FOPS cab that mounts on the machine instead of the standard ROPS frame. It is equipped with a heater, noise isolating interior and fabric seat, radio and cab air filter. The headlight, work light, blinker, reflector + beacon kit is also a standard feature, allowing road traffic registration in some countries. AVANT cab DLX is spacious, fully equipped and well-lighted. Air conditioning (on 635 and 700 series) and air suspension seat are available as an option.

Off centre boom construction

Off centre, telehandler type boom

Excellent, unrestricted forward vision and a clear view of the attachment – more precision, work efficiency and safety. The machine reaches out – not the driver.

Telescopic boom

The telescopic loader boom is an essential part of the stability of the machine. It provides all the advantages of outreach when fully extended and maximum stability as, when retracted, the load is close to the machine during transportation.

Boom self levelling

Boom self levelling makes load handling quicker and more precise. The self levelling system keeps the load automatically level in all positions of the loader boom.

Stable and safe

Rigid articulation joint

The rigid articulation joint prevents sideways pivot and is a very important feature in a machine of this size.

Thanks to this rigid design the risk of tipping the machine over is greatly reduced, because the rear chassis is counterbalancing the front chassis at all times, preventing the front chassis from movement which could otherwise destabilise the machine.

Existing AVANT operators pay testament to the stability of the machine, achieved because of this feature.

Difference between AVANT and machines with oscillating articulation joint is big; both when driving on uneven surfaces and when articulating.

Best ergonomics

Best operator position

- Positioned in the front part of the machine, the operator's seat is as close to the attachment as it can safely be, providing an unrestricted view of the attachment working.
- This guarantees excellent work efficiency, precision and safety.

Top class ergonomics

- Ample space even for larger operators
- Easily operated, well-positioned controls
- Safe and easy access to the driver's seat
- Certified ROPS safety frame with tinted plexiglass canopy is a standard feature
- Three different cabs: L, LX and DLX available as option
