SB-30M Extra –

Pipelaying equipment consists of complete boom system on the left side and counterweights, hydraulic winches for hook and boom with multiple-disc brakes for reliable and smooth operation, on the right side of the machine.

...vering system, automatic boom kick-out, hook block limit
...ndicating devices.

An Outstanding Choice

Excellent stability and easy operation

Two independently controlled hydraulic winches drive the boom and hook systems.

Optional electronic safe load indicator (ESLI) shows necessary load handling information.

Cab roof window provides full view of all operations while the emergency stop button provides operator's safety.

B-30M

The Cummins QSB6.7 engine meets EU Stage IIIA and EPA Tier 3 emissions standards.

This engine combines the highly efficient electronically controlled fuel injection system with high reliability, durability and long maintenance intervals.

Six-sided deluxe interior demountable cab provides excellent visibility, operator's comfort and operation ease with low effort controls. The sound suppressed cab may be optionally equipped with two-post ROPS protecting an operator.

The instrument panels provide the operator with all necessary performance data. The left hand side joystick controls transmission system and steering drive of the machine. The right hand side four levers control the pipelaying equipment.

Full vision of emergency hatch safety.

The two front levers control winches of the pipelaying equipment while the side levers actuate the counterweights that maintain the proper stability of the machine.

STEERING & BRAKING

Two speed geared steering module provides gradual turns while maintaining full power to both tracks plus conventional clutch-brake performance for tight or pivot turns. This type of steering system offers superior traction in all types of operations and terrain. Coupled to 3-speed transmission provides 6 speeds forward and 6 reverse.

The left hand joystick controls transmission and steering drive for up and down shifting, steering, Hi/Lo selection and LH/RH gradual geared turn.

Foot pedal applies both brakes for parking and downhill control. Brakes are spring applied and hydraulically released.
