# THE SPECTIVE OPERATING CONCEPT

 SPECTIVE

# GET IN TOUCH. TAKE CONTROL.

As the demands placed on modern crushing plants increase, so does their complexity. The technology needs to be safe, reliable and as easy to operate as possible - without requiring lengthy technical briefings or instructions. This is exactly where the strength of the new SPECTIVE operating concept lies!

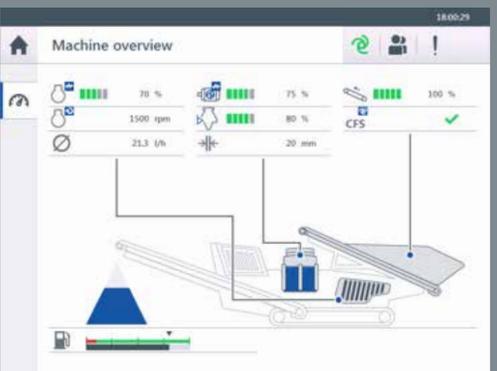

This unique interface between man and machine makes it possible to operate the machines correctly and make full use of their capabilities - easily, logically and intuitively.

### OPERATION: EASY

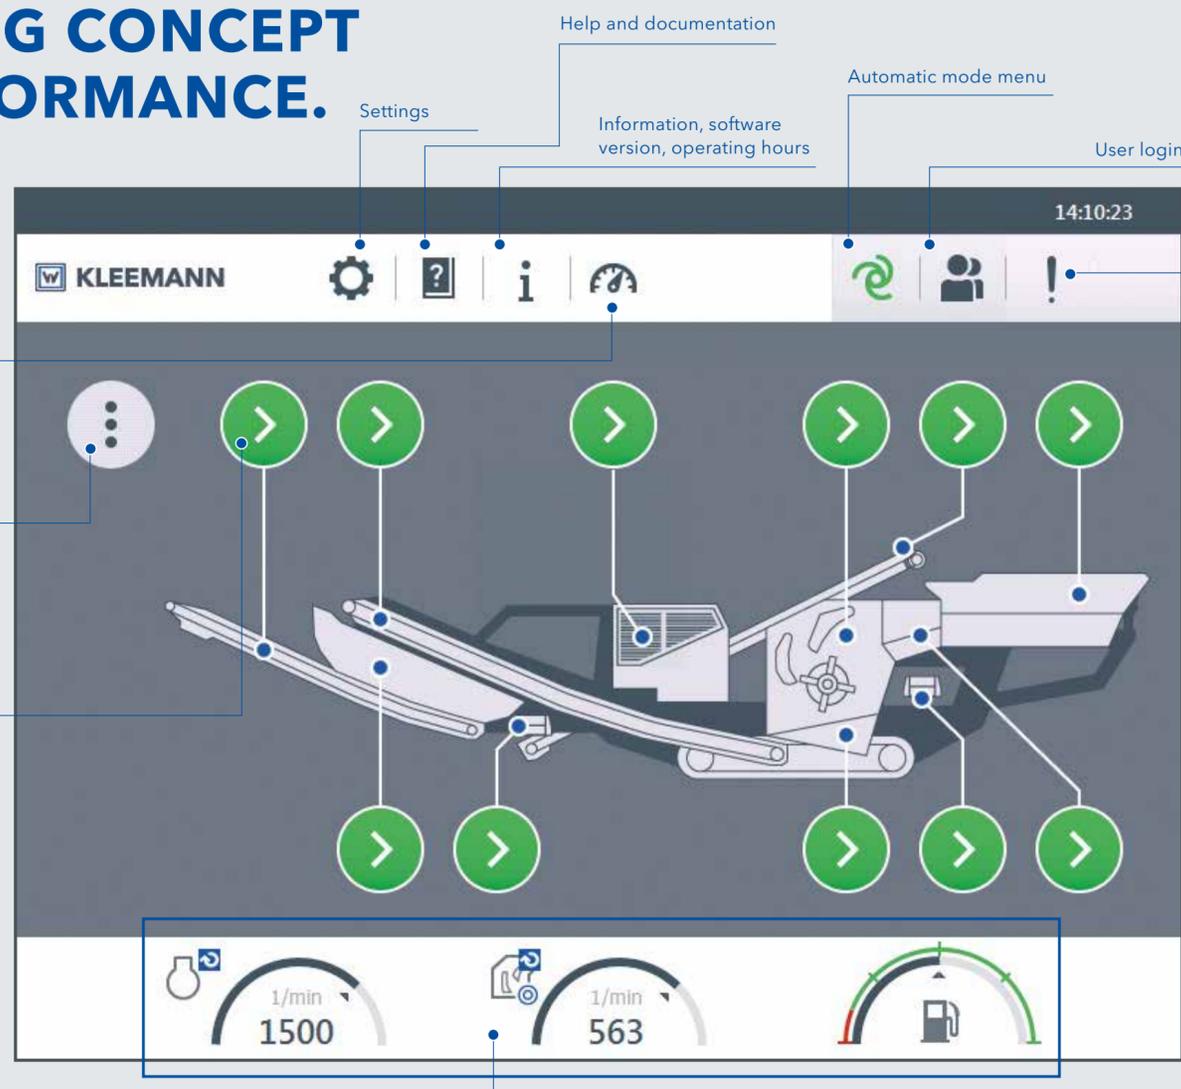

- > Simple, logical menu navigation with clear operating instructions
- > Clear, meaningful symbols for intuitive handling
- > Streamlined software architecture - only important information and functions are displayed

### PRODUCTIVITY: HIGH

- > Operation-relevant machine conditions (e.g. production utilization, gap setting) and key figures (e.g. diesel consumption, tank level) are always current and available
- > An automatic documentation of the information enables an evaluation of plant efficiency

## THE OPERATING CONCEPT FOR TOP PERFORMANCE.

Status display, can be called up in the case of error messages

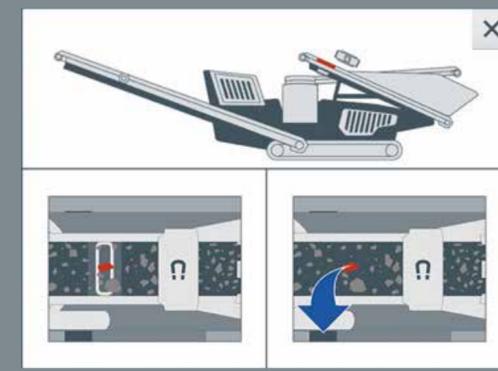

Display of the machine's current operation

### TOUCH PANEL: ROBUST

- > Large 12" touch panel
- > Dust-resistant, splash-proof; operable with finger, pen, tools and gloves
- > Easy to read thanks to high contrast even in direct sunlight

### MACHINE DOWNTIME: LOW

- > Practical support in the case of malfunction
- > Easy-to-understand error description and fault location with troubleshooting assistance
