

The Annual Supply Chain Management Resource Guide

The most up-to-date and easily accessed information on providers of supply-chain products and services

The annual Supply Chain Management Resource Guide is mailed in early January to over 50,000 subscribers to *Global Logistics & Supply Chain Strategies* magazine and is distributed throughout the year at over 20 industry events.

The Resource Guide is a complete directory of profiles from companies offering transportation, logistics, technology and consulting services for supply-chain management, with detailed information about each company, quick and easy product/service identifiers on each profile page and introductory charts by category of product or service which help our readers easily locate companies in specific categories of interest. Each four-color profile is comprised of a 300-word company outline, six product/service category listings, company logo, corporate headquarters location and name and title of the two highest ranking corporate executives. All profiles are produced by *GL&SCS* in a prearranged format.
